Product Information

The **TRU-CARE™** system is a bespoke servicing model from Tru-Bilt Industries in which our programmes work to your specific requirements, without forcing you into predetermined servicing plans. Together we can determine the appropriate level of cover for your facilities and find a programme to suit your situation and budget. Individual options allow you mix and match to suit your needs exactly, and the maintenance and repair risk sits with us, saving you time, money and worry.

Planned Service Programmes

Monitor

- ✓ Planned auditing to an agreed level of risk with timely recommendations. This option is ideal for assets that need careful watching or occasional visual checks.

Manage

- ✓ Full management, replacement and servicing for the life of the asset. This option is the answer to failing assets that must perform.

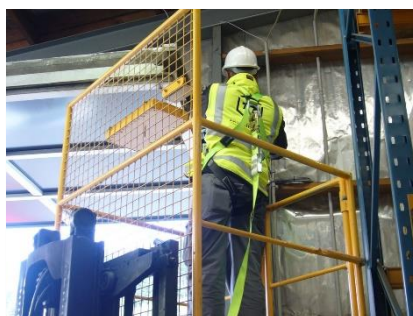

Prevent

- ✓ Full planned maintenance to an agreed level of risk, designed to prevent failure of vital assets through programmed servicing in an agreed time-frame and with planned replacement of agreed parts.

Reactive Servicing Programmes

Resolve

- ✓ Reactive servicing as and when you need it, supporting Tru-Care servicing models with ad-hoc and reactive callouts 24/7.
