## Product Information

The **TRU-DOCK™** Trailer Restraint is a non-impact, hydraulic vehicle restraint system. Available as a standalone unit or integrated with other TRU-DOCK loading equipment, this unit helps prevent unexpected trailer departure from the loading dock during loading and unloading processes. With your trailer backed into position against the dock bumpers, the **TRU-DOCK™** Trailer Restraint will rise vertically and hook the vehicle's rear impact guard, preventing the trailer from pulling away until after the process is complete and the operator depresses the release button. Minimising "trailer creep" and ensuring personnel safety for those loading trailers by hand or forklift, the TRU-DOCK™ Trailer Restraint will ensure complete peace of mind.

## Technical Specification

- ✓ Single phase power pack and control panel with push button activation
- ✓ Over-ride selector switch
- ✓ Corrosion resistant zinc plated finish
- ✓ Protective debris guard
- ✓ Automatic LED interior and exterior lights
- ✓ Standard and mirror-image caution signs
- ✓ Restraining force in excess of 14,500kg
- ✓ Hydraulic operation raises the restraint to the correct height
