Product Information

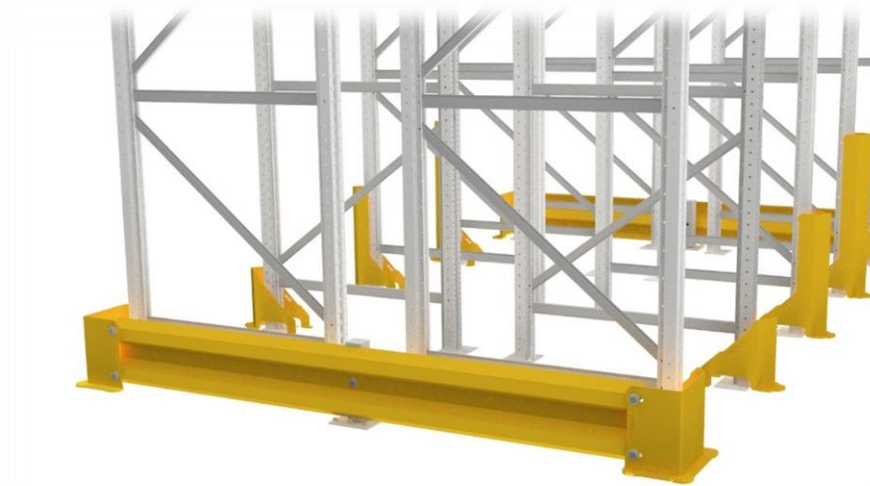

Protecting your assets is a vital, cost-saving measure when you're running a busy distribution warehouse. The TRU-GARD™ Pallet Racking Protector Range is the ideal system for guarding your plant against forklift damage and other collisions. Our range includes upright rack protectors in three sizes, plus end-of-bay protectors that are compatible with TRU-GARD™ barrier rails, also available in three sizes according to the level of risk in each racking area. Our heavy-duty, impact resistant steel protectors provide an easy-fit modular system for both single and double rack bays. Take a load off your mind and reduce the painstaking inefficiency caused by excessive caution and delicacy in your racking area. Should an accident occur, the TRU-GARD™ Pallet Rack Protectors will take the brunt of the impact with little damage, saving your racks from destruction. In the unlikely case the protectors need replaced, it's a simple, inexpensive job compared to the alternative of replacing entire racking systems.

Technical Specification

- ✓ Size ranges available for both upright rack protectors and end-of-bay rack protectors, according to variable risk areas.
- ✓ Each range available in 310mmH, 610mmH or 910mmH.
- ✓ 4mm thick steel uprights with 10mm thick base plates.
- ✓ High-visibility Safety Yellow finish.
- ✓ End-of-bay protectors are compatible with Tru-Gard™ barrier rails; options of 1, 2 or 3 rails for maximum protection.
- ✓ Multiple configurations possible on any site.
